

ANBUHELVAN GANESAN

Ph. +91 8939017440 | anbuchelvangesan.cse2024@citchennai.net | Chennai, Tamil Nadu
LinkedIn: [Anbuchelvan Ganesan](#) | GitHub: github.com/Anbu-00001 | GitLab: gitlab.com/anbuchelvangesan.cse2024

OBJECTIVE

Computer Science undergraduate (B.E., 2028) focused on agentic AI and security engineering — systems that act on their own, and can prove afterwards what they did. Builds multi-agent systems (Jaseci/Jac), Python backends (Django, FastAPI), network forensics tooling, and Android apps; contributes upstream to GitLab. Goethe-Institut German (A1, A2; B1 scheduled). Seeking internships in agentic AI, security, or backend — including remote roles with German-based teams.

EDUCATION

B.E. (Bachelor of Engineering), Computer Science — Chennai Institute of Technology (2024–2028) CGPA: 8.0/10 (4th Sem)
Alwin Memorial Public School — Higher Secondary: 75% | High School: 87%

ACHIEVEMENTS

KANAD S.H.I.E.L.D. 2026 (National Cybersecurity Hackathon) — 2nd Place, Student Track (₹1,00,000) — Gujarat's first police-led cybersecurity hackathon (Cyber Crime Branch, Ahmedabad City Police; with i-Hub Gujarat, TCS, Google). 1,500+ students and 100+ startups from 16 states. Awarded to Team Raptorz for [NetForensiq](#).
JacHacks Spring 2026 (International Hackathon) — Solo entry: 1st Place, Agentic AI Track & Best Startup Idea (\$600 USD ≈ ₹56,000, plus fast-track interviews with Pear VC) — for [CivicMesh](#). Winners: jachacks.org/spring
GitLab (gitlab-org) — Open-Source Contributor: 25+ merge requests merged into GitLab's open-source codebase — GitLab CLI, core platform, and CI/CD tooling in Go and Rust. Verified: contributors.gitlab.com/users/anbuchelvangesan.cse2024
SheSafe Hackathon (RVCE Women in Cloud × DSCI) — Second Runner-Up (₹5,000) — for [ConsentLens](#).

PROJECTS

NetForensiq — Network forensics platform for law enforcement (Python + Django + React): Sole developer. Evidence-integrity platform built to India's BSA §63 admissibility requirements — 2nd place, KANAD S.H.I.E.L.D. 2026. Seals PCAP evidence under SHA-256 with a hash-chained custody log, runs 10 deterministic detection rules (C2 beaconing, DNS/ICMP tunnelling, exfiltration, port scan) mapped to MITRE ATT&CK plus a capped anomaly score, and issues two-party §63 certificates. Static APK triage, SIEM export (ECS/CEF/Wazuh), AES-256-GCM at rest, air-gapped. 447 tests; 11× faster parsing (378s → 34s). github.com/Anbu-00001/NetForensiq
CivicMesh — Multi-agent AI navigator (Jaseci / Jac): A graph-native multi-agent system that turns one sentence in any language into a ranked, eligibility-checked plan for people in crisis — housing, food, healthcare, legal aid. Graph pathfinding, Bayesian outcome-learning eligibility, Reflexion-style self-correction. Live: huggingface.co/spaces/Anbu-00001/CivicMesh
ConsentLens — On-device scam-defence app for first-time internet users (Flutter + Kotlin): Sole developer. A trilingual (EN/HI/KN) Android app that checks pasted SMS, links, and screenshots against a 2026 India scam taxonomy — KYC/Aadhaar fraud, “digital arrest”, UPI refund traps — and speaks a SAFE / SUSPICIOUS / DANGEROUS verdict aloud. Flutter over a native Kotlin layer via MethodChannel, on-device ML Kit OCR, allowlist browser, stalkerware monitoring. No SMS permission by design; runs fully offline. github.com/Anbu-00001/ConsentLens
Anamnesis — Forecast-calibration CLI (Rust): Sole developer. A local-first tool for recording predictions before outcomes are known and scoring whether that confidence was earned. The append-only ledger always grades the first forecast on a claim, so revising a number after the evidence lands cannot improve the record. Reports a Brier decomposition (miscalibration – discrimination + uncertainty), bootstrap confidence bands, reliability diagrams, and a check that flags when ungraded claims differ from graded ones. github.com/Anbu-00001/Anamnesis

EXPERIENCE

Testing & Deployment Intern — Arbitrix Technologies May – Jun 2026 | Stipend: ₹7,500
Tested release candidates and shipped client web projects to production within the team's QA and release workflow.
Frontend Developer — workcommunity.net Jul 2026
Built and deployed the frontend (React/Next.js) for an early-stage startup building AI agents and ERP software; shipped to production on Vercel.

SKILLS

Languages: Python, TypeScript, JavaScript, Jac (Jaseci), Dart, Kotlin, Go, Rust, SQL, C++
Agentic AI: Multi-agent systems, graph-native agents (Jaseci/Jac), Reflexion-style self-correction, Bayesian outcome learning, RAG
Security & Forensics: Network and digital forensics, packet analysis (Scapy, PCAP), threat detection, MITRE ATT&CK, SIEM (ECS/CEF/Wazuh), chain of custody, applied cryptography
Backend & APIs: Python (Django, FastAPI), Node.js, REST APIs, JWT auth **Databases:** PostgreSQL, SQLite, Supabase, MongoDB
ML & Data: Machine Learning, on-device inference (ML Kit, ONNX), MLOps, LightGBM, Data Analytics
Linux & Networking: Ubuntu (5 years, primary dev environment), Bash/shell scripting, network namespaces (ip netns, veth), iproute2, tc/netem, iperf3, TCP/IP, HTTP, DNS
DevOps & Testing: Docker, Git/GitHub, GitLab CI/CD, AWS (EC2, S3, IAM), Prometheus, pytest, Playwright, unit/integration testing
AI Tooling: Claude Code, Google Antigravity
Frontend & Mobile: React, Next.js, Tailwind, HTML, CSS, Flutter (Android), Kotlin
Core CS: Data Structures & Algorithms, Object-Oriented Programming (OOP), DBMS, Operating Systems, Computer Architecture

CERTIFICATIONS

Goethe-Institut German: A1, A2 — B1 scheduled · AWS: Cloud Practitioner, ML & AI · NPTEL: IoT (82%), Data Analytics
